BurrowRx Announces New Horticultural College Scholarship Program Offering $500 Biannually to Students of Any College or University

SAN DIEGO (Friday, April 20, 2018) – Incoming or existing students of any college horticultural program can now apply for a new $500 biannual scholarship from BurrowRx, the San Diego-based manufacturer of the leading burrowing and tunneling rodent control device.

BurrowRx is an innovative solution for controlling burrowing pests that is quickly becoming an important part of every pest management professional’s toolbox. It is the fastest, most effective device on the market for control of gophers, ground squirrels, moles, rats, prairie dogs, and other burrowing rodents.

Peter Kinnally, owner and president of BurrowRx, says he created the BurrowRx Horticultural Scholarship to give back to horticultural students because they end up working careers in pest control, farming and other related fields that are applicable to the control of burrowing animals.

“We want to help boost the careers of hard-working students as they decide to enter a horticultural program to start learning about their future profession,” said Kinnally. “BurrowRx has been a tremendously successful product that is making its own mark in the pest control industry, while being used in related fields like horticulture and farming. We’re proud to be able to give back to those pursuing a profession in horticulture.”

The scholarship will be open to all students attending a U.S.-based higher learning institution, whether a college or university, and will be offered at $500 twice a year – every July and January. The first scholarship will be announced July 1, 2018.

Applications are currently open for the scholarship. Interested students can download an application on the BurrowRx website at www.burrowrx.com/scholarshipapp. Students must apply by June 15, 2018 to be considered for the July scholarship. Applications should be emailed to scholarship@BurrowRx.com.
BurrowRx Announces New Horticultural Scholarship – Cont.

Once the scholarship winner is announced in July, students will then be able to start applying for the winter scholarship later that month.

About BurrowRx

BurrowRx is the leading device for providing control of burrowing and tunneling animals, including gophers, ground squirrels, moles, rats, and prairie dogs. Designated as a pest control device by the Environmental Protection Agency (EPA), BurrowRx pushes carbon monoxide into tunnels with a smoke indicator to provide powerful and effective control. The product is unlikely to harm any nontarget species because once it completely dissipates, the carbon monoxide is no longer a risk to anything entering the burrow system.
